PROFILE SUMMARY

Passionate and detail-oriented Data Analyst with strong skills in Excel, SQL, Power BI, and Python. Experienced in dashboard development, business reporting, automation, data cleaning, and visualization. Worked on multiple real-world projects including ERP systems, finance dashboards, HR analytics, e-commerce analysis, and automation systems.

PROJECTS

Power BI Dashboards

- **Sales Dashboard:** Analyzed revenue, profit, growth %, regional performance, and top-selling products using DAX, Power Query, slicers, and drill-through reports.
- **HR Analytics Dashboard:** Monitored employee attrition, department performance, salary trends, and workforce insights through interactive visualizations.
- **Finance Dashboard:** Tracked expenses, budget vs actual analysis, profit margins, and financial forecasting using KPI-based reporting.
- **E-Commerce Dashboard:** Evaluated customer behavior, repeat purchases, cart trends, and delivery performance using interactive Power BI reports.
- **Coaching Institute ERP Dashboard:** Built an ERP-style dashboard to analyze student admissions, fees collection, attendance, faculty performance, and course popularity.

E-Commerce Analytics Database System | MySQL

- Designed and developed an E-Commerce Analytics Database using MySQL with ER diagrams, normalization, fact & dimension tables, views, and stored procedures. Performed analytical SQL queries for monthly revenue, topselling products, customer retention, repeat customers, region-wise sales, and inventory alerts.

Retail Sales Analysis System | Python

- Developed a Retail Sales Analysis project using Python, Pandas, NumPy, and Matplotlib for data cleaning, missing value handling, trend analysis, customer segmentation, and monthly revenue visualization.

Advanced Excel Dashboard

- Created interactive Excel dashboards using Pivot Tables, Power Query, Lookup Functions, Conditional Formatting, Charts, and Slicers for business reporting and performance analysis.
